copper supply & consumption

1962-1982

COPPER DEVELOPMENT ASSOCIATION INC.

BEST AVAILABLE COPY

Preface

Statistical data on the supply and consumption of copper and copper alloys in the United States are available from many governmental and private sources. In this report original data from these sources are brought together and rationalized by CDA and American Bureau of Metal Statistics Inc. (ABMS) to provide a set of data on U.S. copper supply and consumption that is both consistent and accurate in all aspects from mine to end-use market.

The main sources of information assembled here are the Bureau of Mines in the U.S. Department of the Interior, the Bureau of the Census in the U.S. Department of Commerce, and Copper Development Association Inc. Where data from different sources are conflicting, and where original data appear to be in error, the best judgment has been applied. General sources are shown in the tables throughout the report. Those interested to know the specific sources of any of the data should contact CDA.

The statistics are arranged in a logical sequence to trace the flow of copper in the U.S. economy from mining and scrap collection through smelting, refining and ingot making to the wire rod and wire mills, brass mills, and foundries and then on to the final end-use markets. This flow is shown schematically on pages 4–5. On this schematic flowsheet the major statistics of copper supply and consumption in the United States for 1982 appear. Along with each major statistic on the chart, a reference is shown. This reference identifies the table in the report where details on that item, from 1962 through 1982, will be found. Most data for 1982 are preliminary.

There are four major tables in the report. *Table 1* covers the supply of primary copper. *Table 2* presents data on the supply of copper from secondary sources. In *Table 3*, statistics on the consumption of primary and secondary metals by mills, foundries and other industries are summarized. These three tables are provided by ABMS. Finally, *Table 4* details the supply of mill, foundry and powder products and their consumption in the five end-use market areas. In each of these tables, additions to the flow (such as net imports) are indicated as positive numbers, while subtractions from the flow (such as melting losses or net additions to stocks) are shown as negative numbers.

The arrangement of the data in the report can be illustrated with an example. Consider *Mine Production*, the upper left-hand box in the flowsheet on page 4. As shown in the box, mine production of copper in the United States totalled 1,253.5 thousand short tons in 1982. Beneath this figure a number appears referring to *Table 1, Item 1,* abbreviated *1(1)*. This means that in *Table 1*, on Line (1), mine production is shown for the full period 1932 through 1982. In *Table 1*, on Line (1), a further reference will be found after the item heading *Mine Production*, directing the reader to page 7. This reference means that further details on mine production appear on page 7. In fact, on page 7, a table entitled *Table 1, Item 1* presents the data on mine production by state for 1962 through 1982. In this way all the data on supply and consumption appear in logical sequence proceeding through the report, eliminating the need for explanatory text.

This year the data are shown for an additional year, covering a 21-year period. Thus, data can be compared over a full two decades.

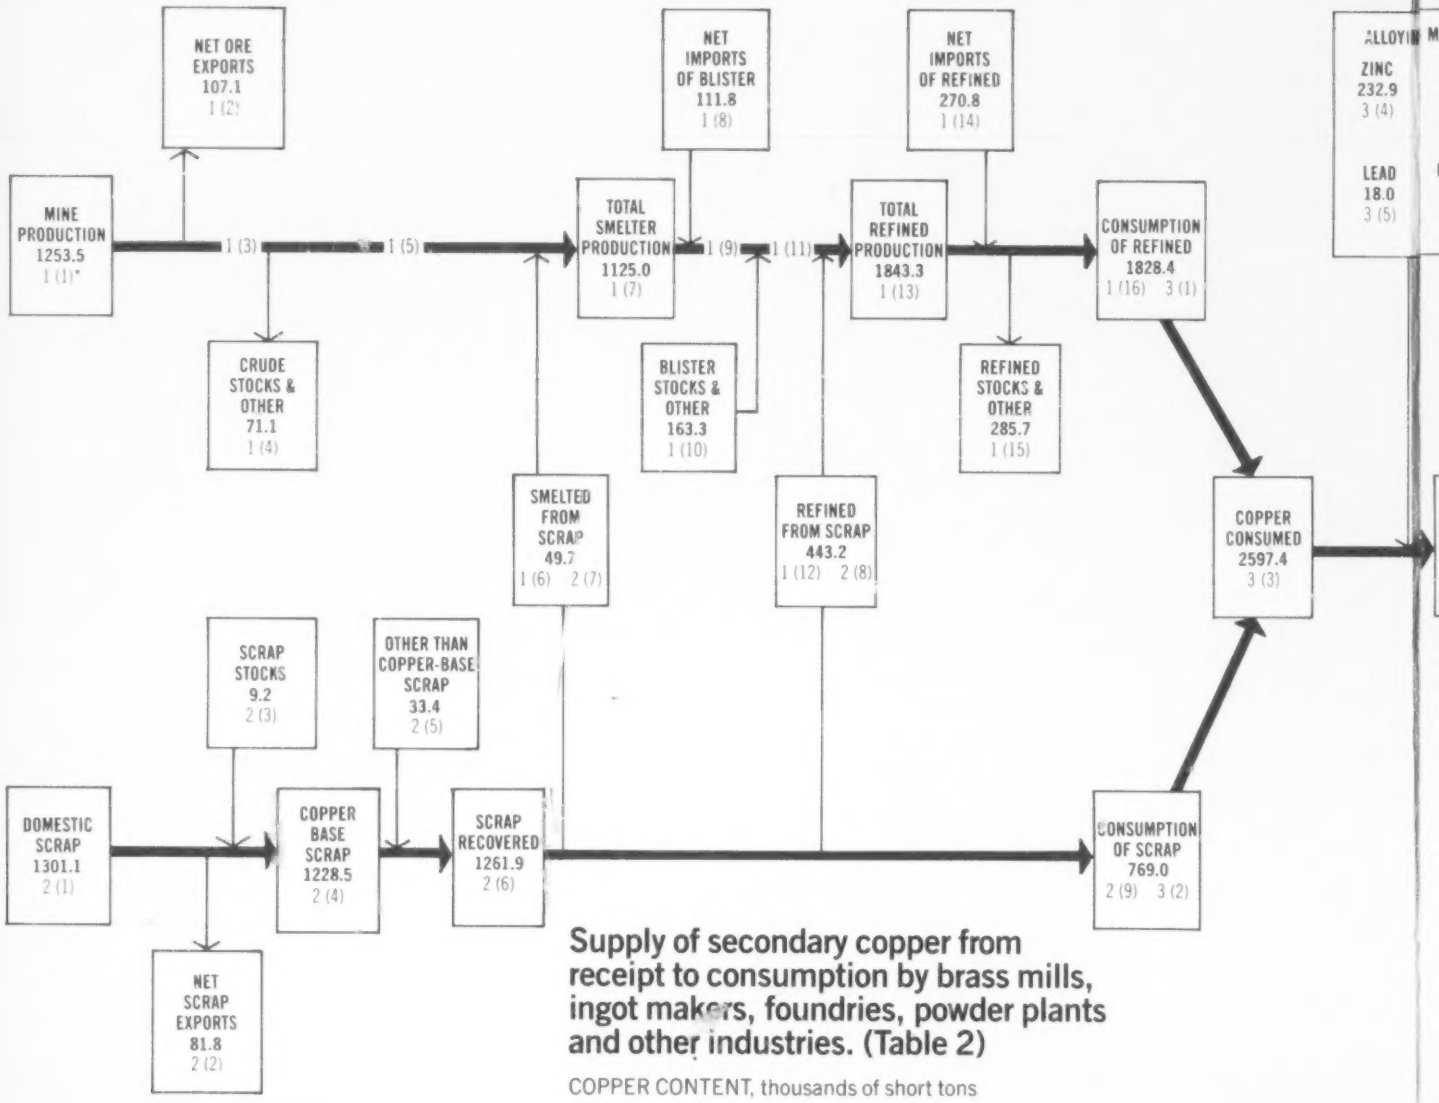
	Page
Preface	1
Copper supply and consumption—A schematic flow chart	4
Table 1, Supply of primary copper	6
Item 1, Mine production—U.S.	7
Mine production—world	7
Item 2, Imports and exports of ore	8
Item 7, Smelter production	8
Item 8, Imports and exports of blister copper	8
Item 10, Blister stocks and other	9
Item 13, Production of refined copper	9
Item 14, Imports and exports of refined copper	9
Item 15, Refined stocks and other	10
Item 16, Consumption of refined copper	10
Table 2, Supply of secondary copper	11
Item 2, Imports and exports of scrap	12
Item 3, Scrap stocks	12
Item 6, Recovery from scrap	13
Item 9, Consumption of scrap	13
Table 3, Consumption of metals by mills, foundries and others	14
Item 3, Consumption of copper by mills, foundries and others	15
Item 8, Consumption of alloying metal by mills, foundries and others	16
Item 12, Net consumption of metals by mills, foundries and others	17
Table 4, Supply and consumption of mill, foundry and powder products	18
Item 16, Supply of brass mill products—U.S.	19
Supply of brass mill products—other countries	19
Item 24, Imports and exports of mill and powder products	20

Copper supply and consumption in the United States 1982

Supply of primary copper from mine to consumption by wire rod mills, brass mills, ingot makers, foundries, powder plants and other industries. (Table 1)

COPPER CONTENT, thousands of short tons



Supply of secondary copper from receipt to consumption by brass mills, ingot makers, foundries, powder plants and other industries. (Table 2)

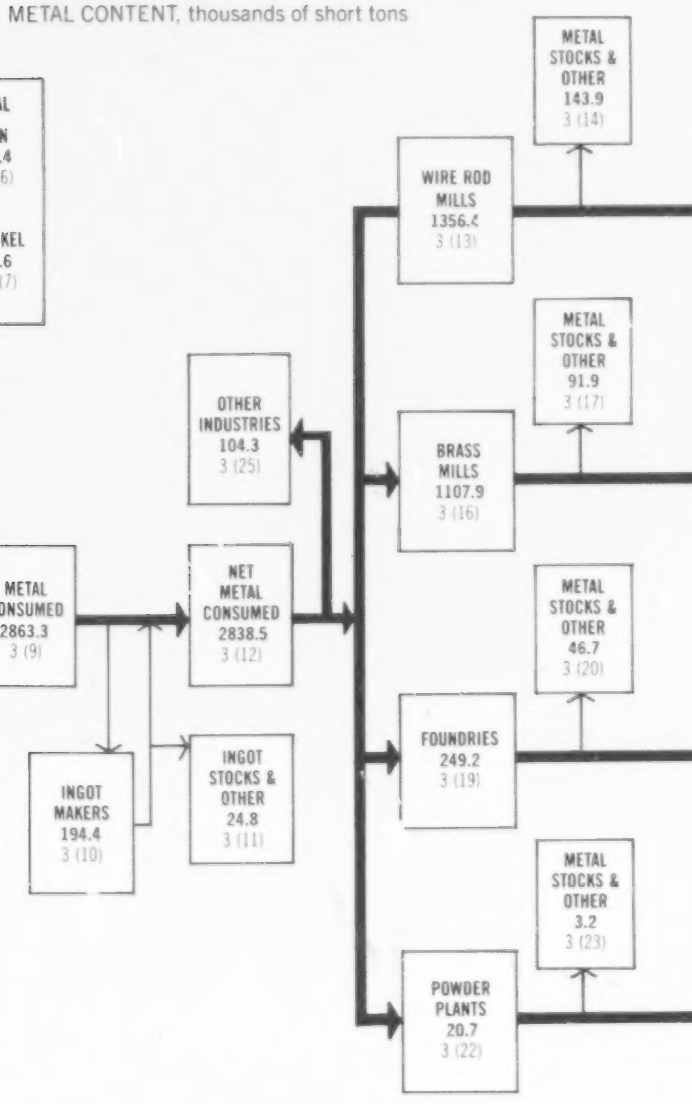
COPPER CONTENT, thousands of short tons

*1 (1) Refers to table and item in report where data for 1962 through 1982 appear

BES

Consumption of metals by wire rod mills, brass mills, ingot makers, foundries, powder plants and other industries. (Table 3)

METAL CONTENT, thousands of short tons



Supply of wire mill, brass mill, foundry and powder products and their consumption in the end-use markets. (Table 4)

METAL CONTENT, millions of pounds

(a) - Net Change – the year-to year increase (+) or decrease (–) of blister copper stocks as reported.
(b) - Apparent Change – the difference between Lines 9 & 11 in Table 1, required to rationalize the CDA flow sheet. Factors other than changes in stocks are included in the apparent change. The sign of the data (+ or –) is opposite that shown in Table 1.

p - preliminary
(a) - The negative (−) sign for each year is used to be consistent with the convention used in Tables 1, 2 and 4 – namely that imports are **additions** to the domestic flow, and therefore (+), while exports are **subtractions** from the flow, and therefore (−).

Table 2, Item 3.

p - preliminary

(a) - Ingot makers consume refined copper, scrap copper and alloying metal, and ship to foundries, brass mills, powder plants and other industries.

(b) - The difference between the copper and alloying metal consumed by ingot makers and the ingot consumed by the customers of the ingot makers. This difference consists of melting and other losses in producing ingot, stock changes, and other factors.

(c) - Chemical, steel, aluminum and other industries.

Table 3, Item 3.

p - preliminary

(a) - Chemical, steel, aluminum and other industries.

(b) - Total consumption of ingot shown here is less than the consumption of metal by ingot makers shown in the details of Table 3, Item 3 and Table 2, Item 3. The difference, shown as Ingot Stocks & Other in Table 3, is primarily melting and other losses in the making of ingot.

Table 4

Markets include – Building Construction: Plumbing & Heating; Building Wiring; Air Conditioning & Commercial Refrigeration; Builders' Hardware; Architectural.
Electrical & Electronic Products: Telecommunications; Power Utilities; Lighting & Wiring Devices; Electronics (except Consumer).
Industrial Machinery & Equipment: Heavy Industrial Equipment; Industrial Valves & Fittings; Heat Exchangers; Off-Highway Vehicles; Non-Electrical Instruments.
Transportation Equipment: Automobile, Truck & Bus; Railroad; Marine; Aircraft & Aerospace.
Consumer & General Products: Appliances; Fasteners & Closures; Military & Commercial Ordnance; Coinage; Utensils & Cutlery; Miscellaneous.
